BACKGROUND

- Reducing restrictive practices fundamentally important
- Focus traditionally on patients/service users not interventions with staff
- Confusing landscape
- Simple things/key ingredients may work better

The COMPARE and CONTRAST studies are funded by the National Institute for Health Research (NIHR) Health Services and Delivery Research programme (Grant Reference Numbers [NIHR HS&DR 16/53/17](#) and [NIHR127281](#)). The views expressed are those of the author(s) and not necessarily those of the NIHR or the Department of Health and Social Care.

AIM & OBJECTIVES

- Aim: to identify effective components of initiatives that seek to reduce restrictive interventions in adult mental health inpatient settings using the Behaviour Change Technique (BCT) taxonomy
- Objectives:
 - i. Provide an overview of initiatives
 - ii. Classify the components of those initiatives in terms of BCTs and ascertain frequency of use
 - iii. Explore effectiveness by examining BCTs and initiative outcomes
 - iv. Identify and prioritise BCTs showing most promise of effectiveness for future testing

COMPARE

**Mapping Interventions to Reduce Restrictive Practices
in Adult Mental Health Settings**

Preliminary Review Findings

OVERVIEW

Disparate

- Sources / formats
- Aims / targets
- Procedures
- Terminology
- Evaluation methods

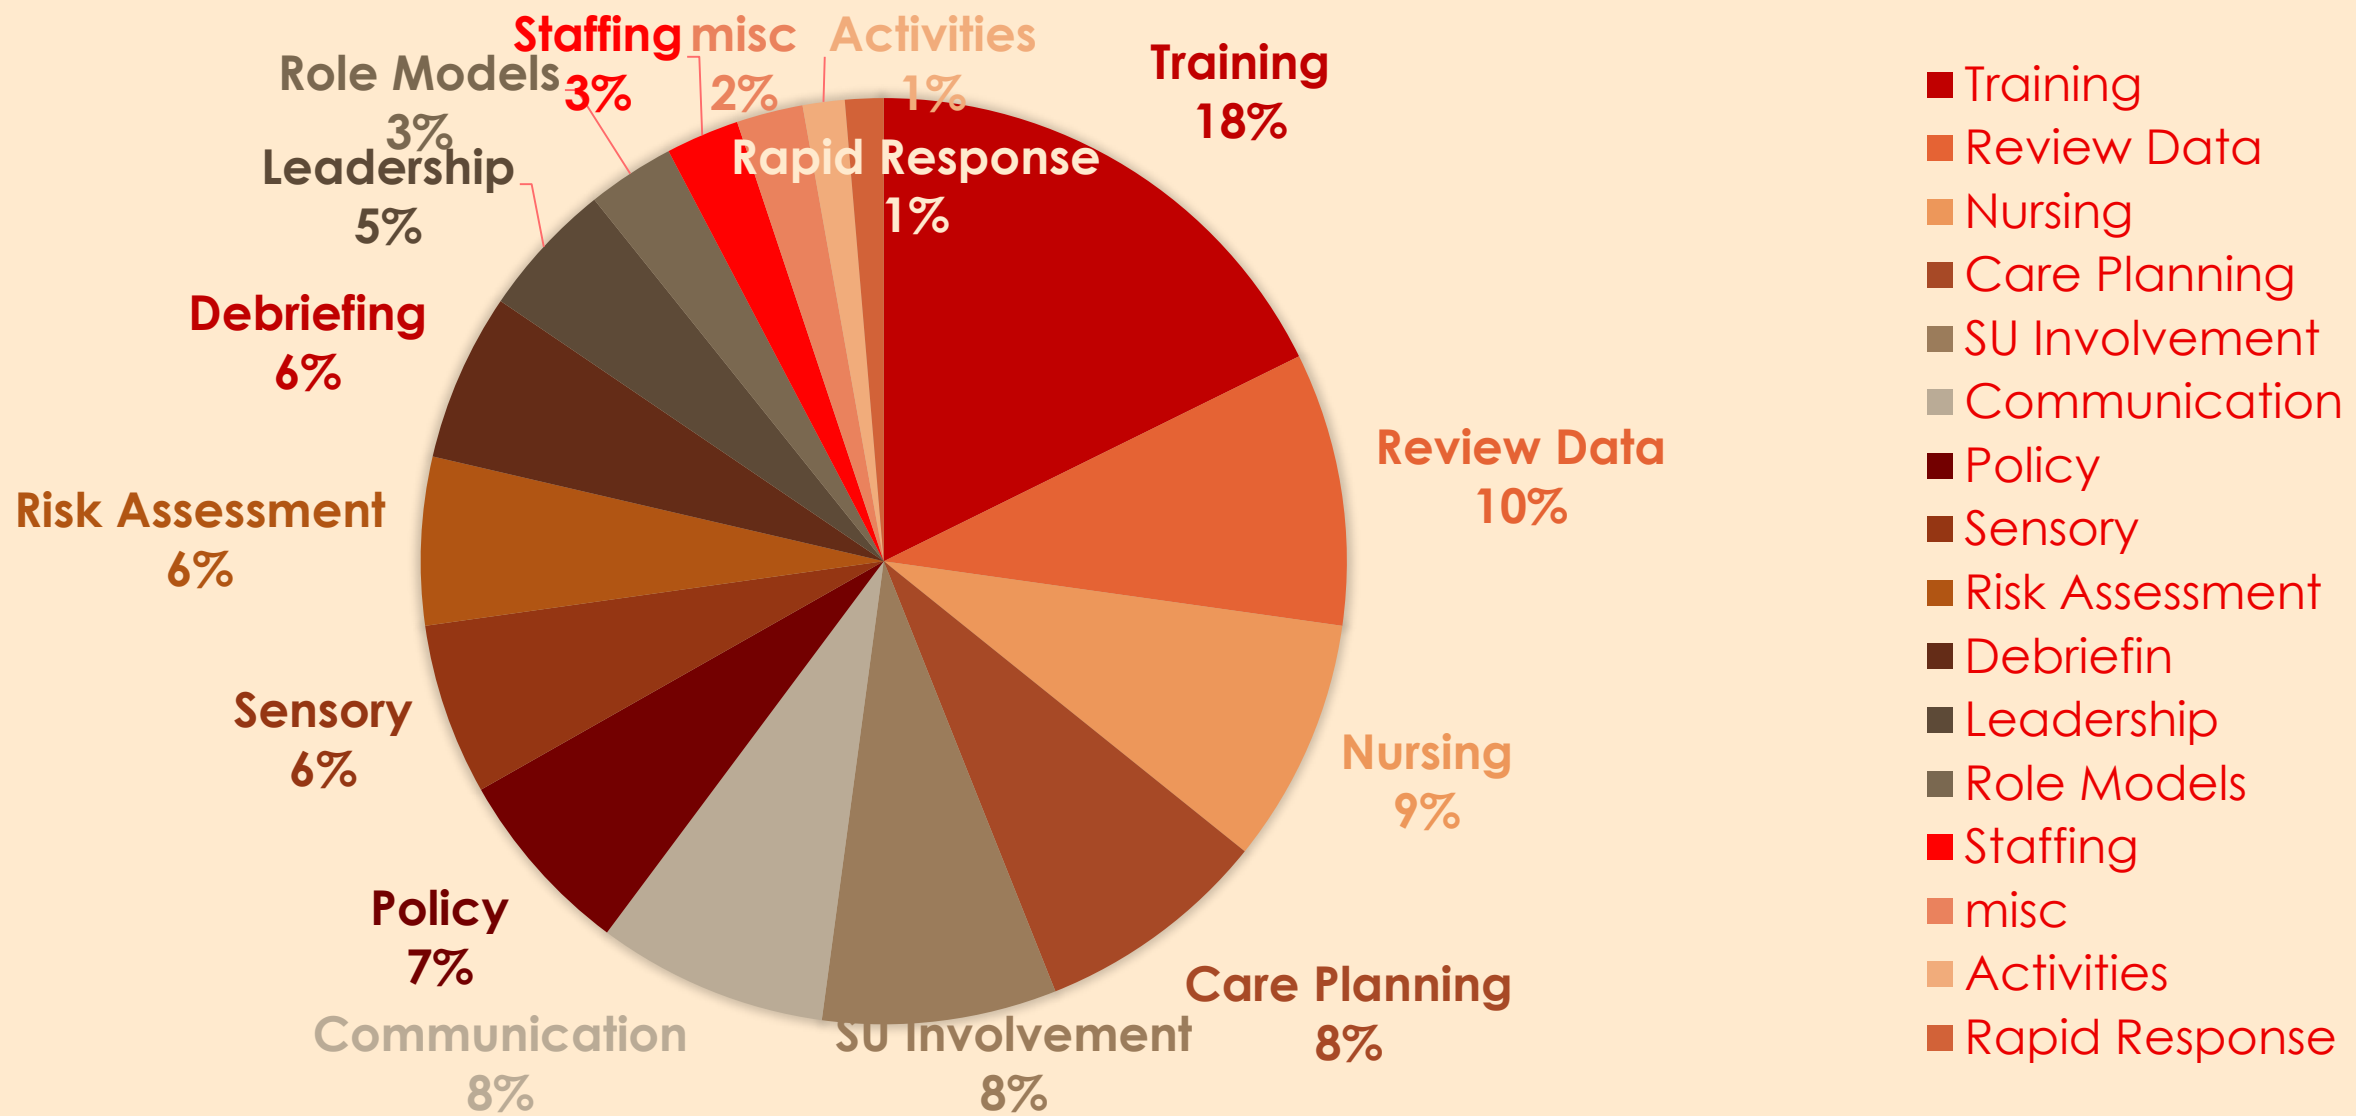

Complex

- Multiple procedures / combinations
- Multiple outcome measures

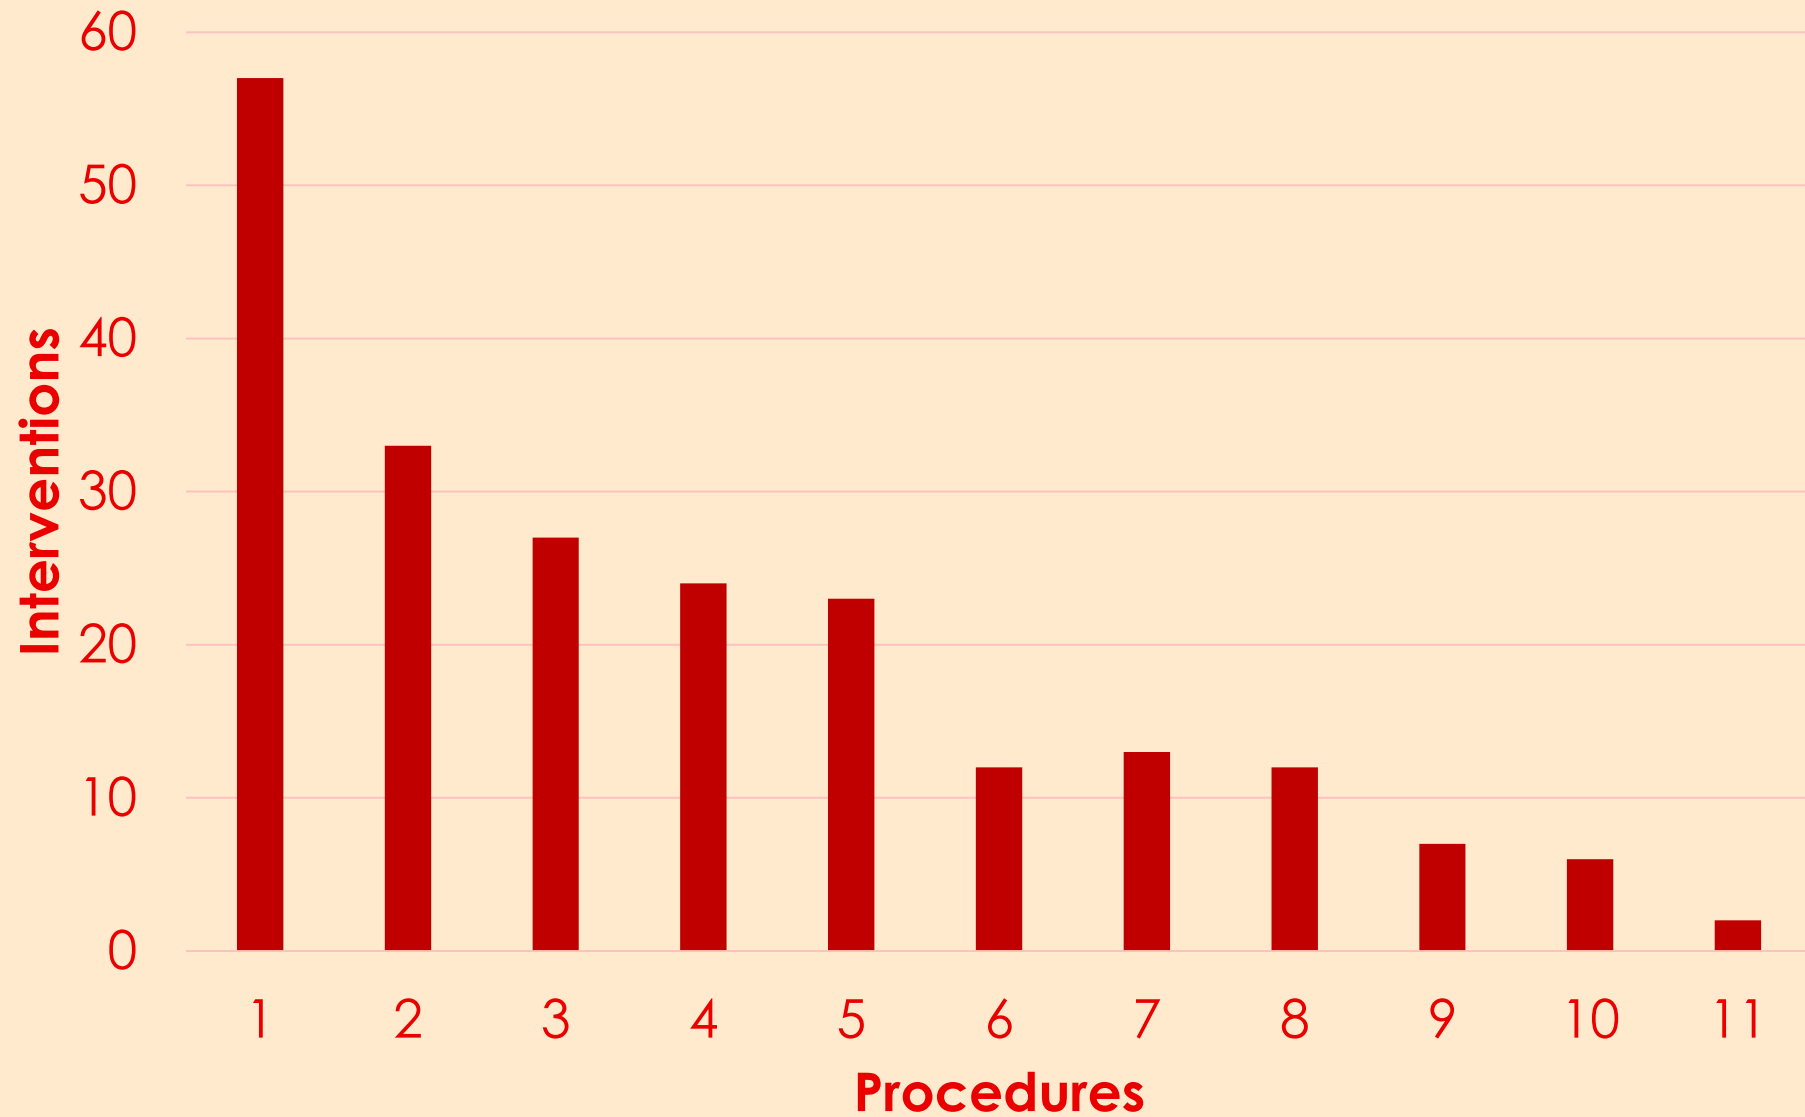

Variable quality

- Reporting inconsistent & incomplete
- Only 24 controlled studies (9 RCTs)
- Few replication studies
- Little SU involvement

INTERVENTION PROCEDURES (COMPLEX)

MULTIPLE PROCEDURES (COMPLEX)

29 INTERVENTION 'FAMILIES'...

Beacon Project
 Behavioural support planning
 City Nurse*
 Comfort rooms
 CPI/MAPA

DASA
 Initiatives to reduce seclusion & restraint+
 No Force First
 Novel Seclusion Reduction Program
 Open door policy+

Patient Focused Nursing*
 Positive & Safe
 PROMISE
 Recovery-based principles
 Review *

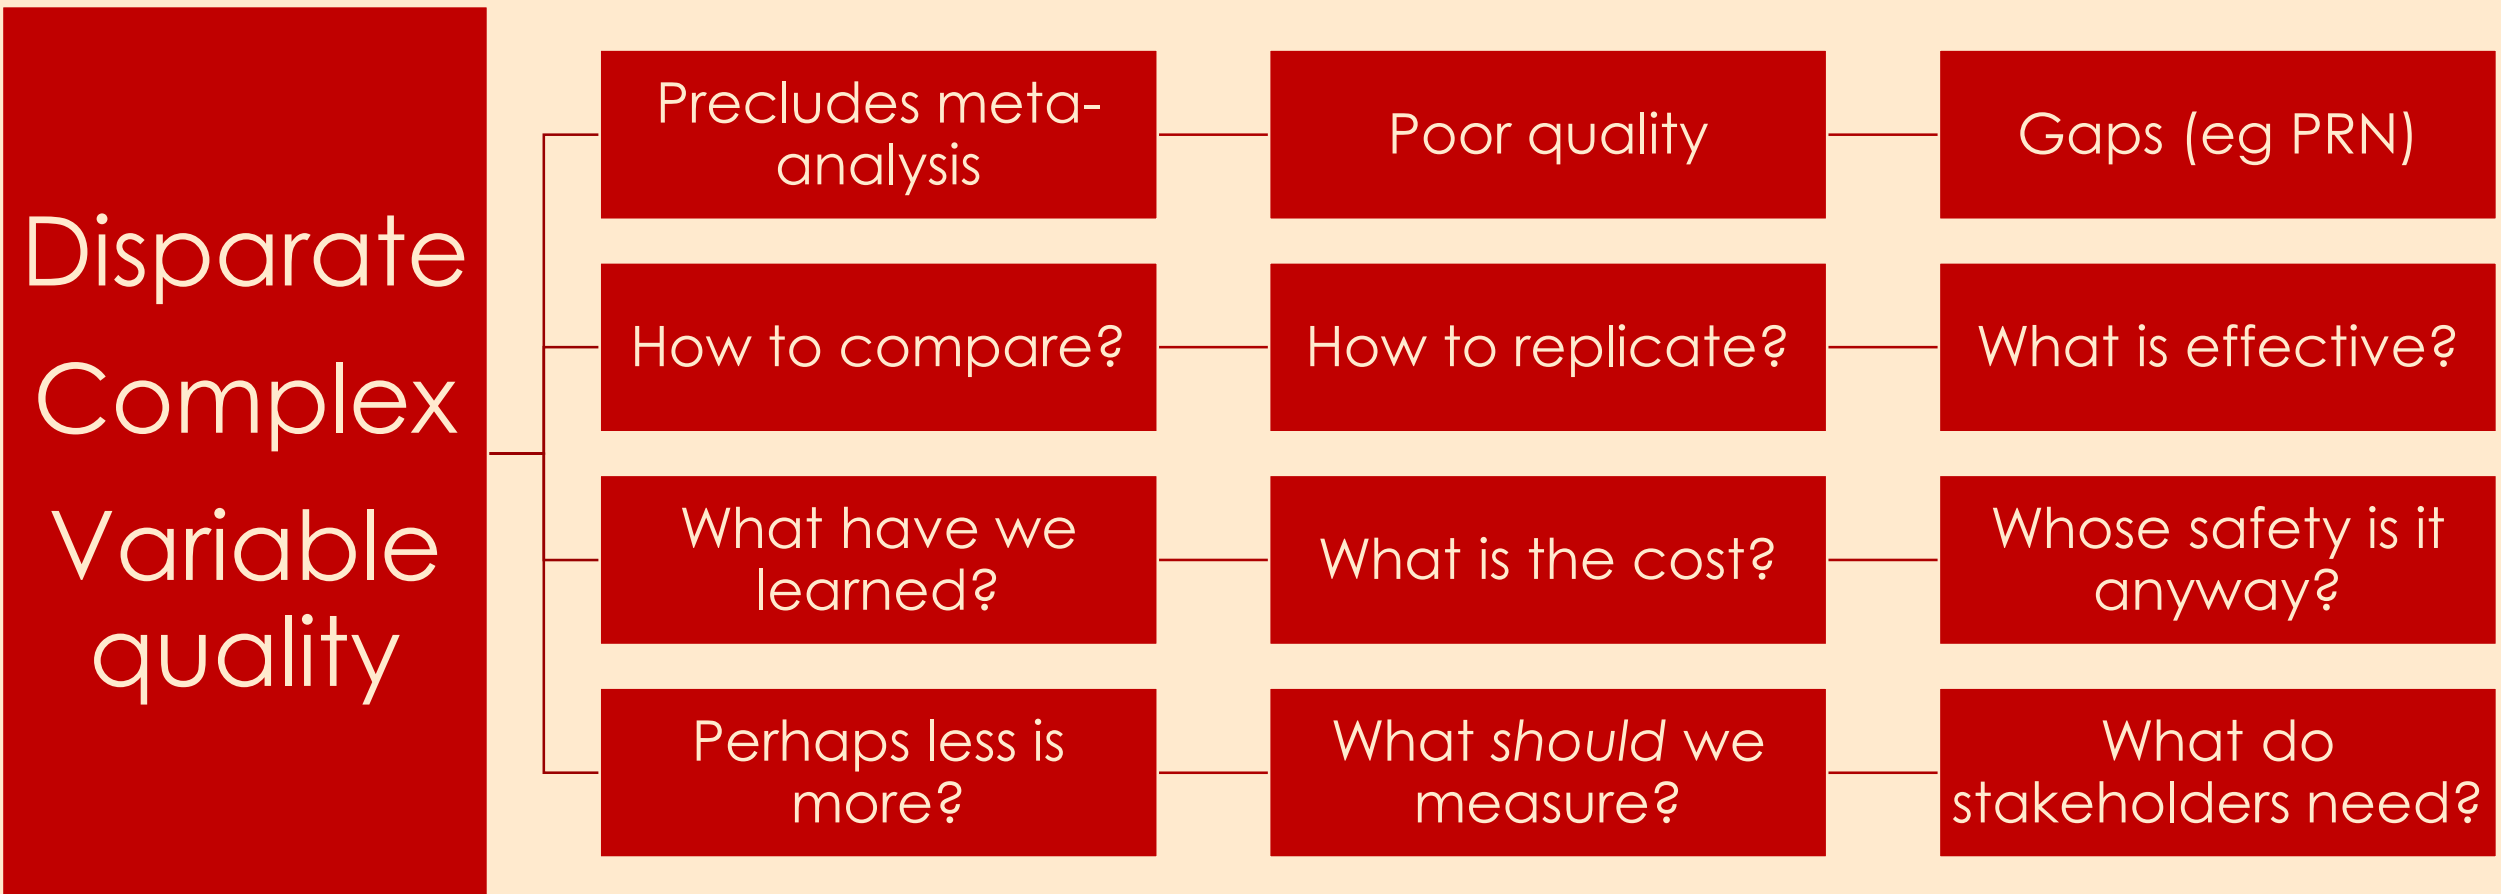

TYPE OF SU INVOLVEMENT (in intervention)

COSTS

- Only 22 made reference to:
 - Cost of implementing the intervention
 - Financial impact of the intervention, e.g. the reduced costs of staff absence

CONCLUSIONS

Behaviour change techniques in interventions to reduce restrictive practices

"Staff training"	BCTs
Education about restrictive practices	5.1 Information about health / 5.4 emotional / 5.3 social and environmental consequences 5.2 Salience of consequences 9.1 Credible source
Education about de-escalation	4.1 Instruction on how to perform behaviour
Demonstration	6.1 Demonstration of behaviour
Role play	8.1 Behavioural practice / rehearsal 6.2 Social comparison 3.2 Social support (practical or 3.3 emotional)

Taxonomy of BCTs (16 groups; 93 BCTs)

1. Goals & planning	2. Feedback & monitoring	3. Social support	4. Shaping knowledge
5. Natural consequences	6. Comparison of behaviour	7. Associations	8. Repetition & substitution
9. Comparison of outcomes	10. Reward & threat	11. Regulation	12. Antecedents
13. Identity	14. Scheduled consequences	15. <i>Self-belief</i>	16. <i>Covert learning</i>

Identified:

42 out of 93 BCTs

14 out of 16
categories

Findings

20 most frequent identified BCTs by category

Problem solving

Action planning

Goal setting: outcomes

Goals & planning

Instruction on how to perform behaviour

Information about antecedents

Shaping knowledge

Restructuring social environment

Restructuring physical environment

Adding objects to environment

Antecedents

Feedback: outcomes of behaviour

Feedback: behaviour

Monitoring Outcomes: no feedback

Self monitoring: outcomes of behaviour

Feedback & monitoring

Framing / reframing

Id of self as role model

Identity

Practical

Emotional

Social support

Prompts or cues

Associations

Comparison of behaviour

Info: health consequences

Natural consequences

Credible source

Comparison of outcomes

Behavioural practice or rehearsal

Repetition & substitution

Reward & threat

Regulation

Scheduled consequences

1. Goals & planning

Problem solving, action planning, goal setting & review for both *behaviour & outcomes of behaviour*

BCT 1.2 'Problem solving' 74%

e.g. high rates of restraint
∴ need improved de-escalation skills

BCT 1.4 'Action planning' 55%

e.g. retrain all staff & introduce risk assessment

BCT 1.1 'Goal setting (outcomes)' 16%

e.g. reduce restraint by 50%

Strengths of #BCTCompare

Compared intervention content systematically

Disaggregated complex interventions

Informs targeted interventions to explore effectiveness of specific components

Potential exploration of what is not there

Many interventions poorly described

Risk of over-coding e.g. *'instruction to perform behaviour'*

Outcomes: Different methods and outcomes mean we cannot yet tell which BCTs are more effective

Limitations of #BCTCompare

Conclusions

- Intervention content is dominated by three categories of BCTs
- Need testing of BCTs (or categories) in isolation
- More consistent reporting
